

OCR Annotation Training: Assignment Worksheet 2

Instructions: Carefully examine the periodical article page crop below. Using your annotation tool, transcribe the entire page under the **Version 3.0 OCR Guidelines**. You must locate and isolate running headers, insert structural object tags for figures alongside their captions, verify all plain text spellings against the image layout, and keep footnotes properly situated.

Practice Task 2: Figures, Captions & Footnotes

Ecology Today | March Issue

Understanding Modern Ecosystems

The intricate web of interactions within forest ecosystems dictates the survival of numerous species. Recent surveys have indicated a decline in amphibian populations due to microclimate alterations. These shifts are primarily driven by deforestation and localized temperature increases, which disrupt breeding cycles.

[GRAPHIC DEPICTING POPULATION DECLINE OVER 10 YEARS]

Figure 1: Amphibian population decline over the last decade.

Conservation efforts must prioritize the restoration of natural water channels to reverse this trend before irreversible damage occurs. Community-led initiatives have shown promising results in mitigating these adverse effects.

* Data collected from the Northern Hemisphere Survey, 2025.
